

# Do you or someone you know have memory problems?

We are looking for individuals aged 55 years and older who are healthy or have different amounts of memory loss to participate in a brain imaging study.

Interested older adults with and without memory loss are invited to phone and possibly participate in a clinical research study investigating the relationship between memory loss and changes in the brain using magnetic resonance imaging (MRI).

Each participant will require a study partner who knows them well and who is willing to answer a few questions.

Those who call will be asked some initial screening questions over the telephone. Those who meet the study requirements will be invited to come into Robarts Research Institute, where they will undergo an assessment of their memory and have an MRI scan of their brain.

Adults ...

- ... aged 55 years and older
- ... with or without memory concerns
- ... with no history of stroke
- ... with no metallic implants or implanted devices
- ... who are interested in research
- ... and have a willing study partner

are invited to call or email us. One of our researchers will contact you promptly.

Please call **(519) 931-5777 ext. 24039**  
or email **Brain\_Research@robarts.ca**  
for further details.

Participation in this research study will not affect the support services received by ASLM clients from the Society.
